NEW RP Contactor

Menomonee Falls, WI- New Reversing Polarity contactor builds on proven Trombetta technology

The NEW RP Contactor is a state of the art design integrating two solenoid contactors into a single housing unit. By utilizing this design, Trombetta has eliminated many materials used in final apparatus assembly and simplified product wiring. The RP Contactor permits permanent magnet motors to run forward and backward with one simplified component. The RP contactor was designed for easy installation, which saves time and money.

Permanent magnetic motors can be found in a variety of applications including accessory winches found on vehicles. In these applications where space and ease of use are important, the RP Contactor shows excellent promise. Hydraulic run vehicle accessories such as snow plows and material spreaders are another application where the RP Contactor size, simplicity, and operation are beneficial features for use with permanent magnet motor usage.

Based in Menomonee Falls, Wisconsin, Trombetta has been a leading manufacturer of industrial work solenoids, DC contactors, electronic controls and engineering services for over seventy years.
