Trombetta's HP Plastic DC Contactor Brings High Performance to Starting Applications

Milwaukee, WI – A new level of performance for starting applications thanks to Trombetta Motion Technologies High Performance (HP) Plastic DC Contactor. Trombetta's HP will outperform existing levels while staying at the same size and at a competitive price point.

Trombetta named this plastic DC Contactor High Performance because it is designed to perform better in adverse conditions. Specifically, Trombetta's HP performs better than the status quo because it provides:

- Higher inrush capability
- Improved weld resistance
- Higher tolerance for adverse conditions

All of this is accomplished with lower voltage requirements.

These new features will benefit both Lawn and Garden manufacturers and consumers with increased reliability. Other manufacturers and consumers who will benefit can be found across all recreational vehicle applications, from snowmobiles, motorcycles to jet-skis and golf carts.

Trombetta already has plans to expand the HP technology to its line of sealed products, which protect against water/corrosion problems.

The increased performance of the Trombetta's HP will benefit both manufacturers and consumers in another way – less warranty issues as a result of its superior performance.
