Completely-Sealed Plastic DC Contactor

Milwaukee, WI – Trombetta Motion Technologies offers a sealed feature for plastic DC Contactors. This feature will provide an unsurpassed level of protection from moisture and corrosion, as well as strengthen performance of recreation and transportation equipment in key profit-building markets.

The sealed feature will have a major impact on equipment that is exposed to rugged activities as well as water sprays or splashes. Industry applications that will benefit directly from this sealed feature include the following:

- Lawn & Garden
- Personal Watercrafts
- ATVs
- Transportation Equipment
- Snowmobile
- Agriculture and Construction Equipment

The direct benefit to companies that produce these types of equipment is quite simple –without exposing the DC contactor to the corrosive effects of water and debris, this sealed feature will make their products last longer. This benefits the end-user as well as the manufacturer. By definition, these vehicles work hard and/or play hard. OEM's will appreciate that they can be less concerned with the dreaded "w" word – warranty the seal really is the deal.

"What makes this sealed feature unique is that it completely seals the plastic DC Contactor...everything, including the O rings that are assembled into a new plastic housing which protects everything from water and debris," explained Charles Trayner,
