Trombetta unveils the Defender: Reliable and Tough

Milwaukee, WI – Trombetta's Defender is a high performance Main Power Relay specifically engineered for use on heavy duty industrial equipment, such as earth movers, construction and paving equipment. It will perform unconditionally under extremely tough conditions.

The Defender allows full engagement and disengagement of the battery from the electrical system, thus avoiding accidental battery drain that leads to inadvertent power outages and costly downtime. Trombetta's team of engineers have designed and tested the Defender to perform in the tough environments combining extreme temperature swings, dirt, moisture and high vibration common to large, equipment used in construction and agricultural industry.

With Trombetta's Defender your equipment gains protection on multiple fronts with one cost effective device. While it is built tough to handle a variety of exterior environmental conditions, it is also equipped with built in Transient Voltage Suppression (TVS) to defend sensitive electronics from the inside. With Trombetta's Defender, the best defense is a two-pronged strategy that protects your electrical system.

Based in Menomonee Falls, Wisconsin, Trombetta has been a leading manufacturer of industrial work solenoids, DC contactors, electronic controls and engineering services for over seventy years.
