Added Series for Reversing Polarity DC Contactor

Trombetta has recently added an additional series to the Reversing Polarity (RP) DC Contactor Family.

The RP DC contactor family integrates two solenoid contactors into a single housing unit. By utilizing this design, Trombetta has eliminated many materials in final apparatus assembly and simplified product wiring. The RP contactor permits permanent magnet motors to run forward and backward with one simplified component.

Previously this family was only offered in a 12 volt; recently Trombetta has designed and is manufacturing a 24 volt RP DC contactor.

The RP DC contactor family can be used in a variety of applications including winches found on vehicles, hydraulic run accessories such as snowplows and RV vehicles for slides and leveling applications.

Based in Menomonee Falls, Wisconsin, Trombetta has been a leading manufacturer of industrial work solenoids, DC contactors, electronic controls and engineering services for over seventy years.
