### **Unique Design by Trombetta**

Trombetta recently achieved a significant milestone when we were awarded the formal approval for the custom solenoid developed specifically for a large consumer power tool products manufacturer.

This is a truly custom solenoid in that it was designed specifically for this application. Key to this was that it had to be small enough to fit in a hand held power tool and yet have enough force to satisfy the application. Trombetta is an expert in the design of Industrial Work Solenoids and used this knowledge and expertise to design a small yet powerful custom solenoid. This solenoid utilizes a generally simple design and this was done specifically so that the solenoid could be manufactured with a high rate of reliable precise operation in the power tool. The solenoids plug-in interconnect provides for ease of assembly by the customer. This custom solenoid actually engages the clutch mechanism on the power tool.

As a result of this unique design the manufacturing capabilities utilized a new process. The tooling and test equipment expanded to include ultrasonic welding to manufacture this unique custom solenoid.

Based in Menomonee Falls, Wisconsin, Trombetta has been a leading manufacturer of industrial work solenoids, DC contactors, electronic controls and engineering services for over seventy years.
